## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 2\_COD\_Question 1

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

### 1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

**Input Format** 

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

#### **Output Format**

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

### Sample Test Case

```
Input: a b c -
Output: Forward Playlist: a b c
Backward Playlist: c b a
Answer
#include <stdio.h>
#include <stdlib.h>
struct Node {
Char item;
  struct Node* next;
  struct Node* prev;
}:
// You are using GCC
void insertAtEnd(struct Node** head, char item) {
  //type your code here
  struct Node *newnode;
  newnode=(struct Node*)malloc(sizeof(struct Node));
  if (newnode !=NULL){
    if (*head==NULL){
    newnode->item=item;
      newnode->next=NULL;
      newnode->prev=NULL;
```

```
*head=newnode;
}
else {
                                                                              24,150,1080
                                                    24,150,1080
          struct Node*p;
p=*head;
while '
          while (p->next !=NULL)
             p=p->next;
          newnode->item=item;
          p->next=newnode;
          newnode->next=NULL;
          newnode->prev=p;
      }
                                                                              247501080
 void displayForward(struct Node* head) {
       //type your code here
       struct Node* p;
       p=head;
       while (p!=NULL) {
         printf("%c ",p->item);
         p=p->next;
       }
       printf("\n");
    void displayBackward(struct Node* tail) {
    //type your code here
       struct Node* p;
       p=tail;
       while(p!=NULL){
         printf("%c ",p->item);
         p=p->prev;
      }
    }
